

Tymur Avramenko

Python Backend Developer

Email: tymuravramenko99@gmail.com | Phone: +48 577 537 435 | Telegram: @Gr1zeR1qq

Location: Sandomierz, Poland (UTC+2) | Work format: Remote | Availability: Full-time / Part-time

ABOUT ME

Backend developer with one year of experience, passionate about building reliable and scalable services. Actively building a portfolio of real-world projects — from authentication services to media processing and low-level network tools. Interested in microservice architecture and its practical application. Continuously deepening knowledge in system design, asynchronous programming, and related technologies.

SKILLS

Python, Rust, SQL, NoSQL, FastAPI, Celery, Redis, PostgreSQL, RabbitMQ, Docker, Git, GitHub Actions, httpx, Unit Testing (pytest), Linux (Arch).

- English — B1
- Russian - Native
- Ukrainian - Native
- Polish - B1

PORTFOLIO

Task Manager — Distributed task management system with a Telegram bot. Python (FastAPI) + Rust (Axum) + RabbitMQ for events + aiogram for notifications.

URL Shortener — High-performance URL shortener on a microservice architecture. Rust (Axum) handles redirects, Python (FastAPI) handles analytics, Redis handles caching.

FastAPI Auth Service — Production-ready authentication microservice with JWT, token rotation, Redis blacklist, RBAC and rate limiting. Designed as a reusable microservice.

Media Processing Service — Service for uploading and background processing of media files. Celery processes images (Pillow) and video (ffmpeg), files are stored in MinIO (S3-compatible storage).

aiorequests — Async HTTP client built on pure Python stdlib. Written to gain a deep understanding of asyncio, TCP/TLS, and the HTTP protocol internals.

FastAPI Limiter — Rate limiter prototype for FastAPI with fixed-window and sliding-window algorithms, supporting in-memory and Redis backends.

Task Queue — Minimal async task queue with in-memory and Redis brokers, written from scratch to study queue patterns.

Pre-commercial experience: Freelance. Stack: Python, FastAPI, aiogram, PostgreSQL, Redis, Docker. 2025 — present.

EDUCATION

Computer Technician, ZSE (Zespół Szkół Ekonomicznych), Sandomierz, Poland

September 2025 — present (2nd year)
